Status (some highlights)

- **R&E Community is aware of the growing relevance of Cloud services.**
- The **GÉANT IaaS Framework** (“the Framework”) has generated a lot of interest due to its multiple benefits (savings, agility, SSO via SIR, direct peering).
- The **new Spanish legislation on public procurement**, which **finally transposes the EC directive**, came into force on March 9th.
- **Direct contracting/purchasing of IaaS services on advantageous terms without the need for tendering, multi-supplier and with no minimum value**; that is, an ideal environment to start a pilot project or a proof of concept and grow according to needs and confidence in the solution model.
- **24 institutions** are already using the Framework (public ones not directly yet).
